

CARD VERIFY

Verification of compliance of the contents of portable objects

This solution verifies contactless cards or tickets before they are distributed to customers. A clear result indicates if the configuration and the initial data are valid.

SERVICES PROVIDED

CONTENTS VISUALIZATION

Decoded or raw with highlighting of non-conformities.
Signature verification.

TEST REPORTS

Automatic generation of detailed test reports in Word or PDF format.

AUTOMATIC STORAGE

Of all the tests performed.

ADAPTABLE TO YOUR NEEDS

- Reading and decoding of the contents of contactless cards and tickets
- Verification of compliance with reference specifications (data model, file structure)
- Easy and efficient: no expertise required
- Simple to use: automatic card detection

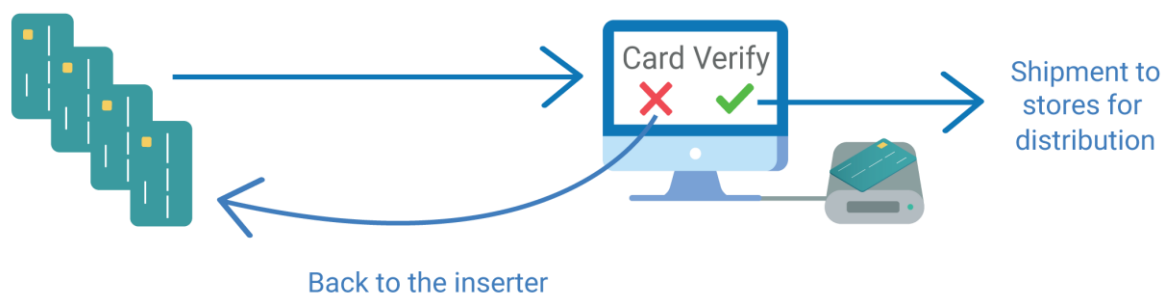

USE CASE EXAMPLE

Verification of a batch of cards to be deployed after reception.

A transport operator receives cards that need to have specific initial data before being sent to the customers (such as a Hoplink application). **Card Verify** quickly verifies that the cards are compliant and can be deployed to stores or retailers.

The inserter produces the cards then sends them to the operator

The operator checks the conformity of the cards

KPI

EFFICIENCY

Automatic detection of the data model.
Detailed report.

TIME SAVING

Quick detection of non-conformities of cards or tickets.
Automatic log of tests.

SPECIFICATIONS

COMPATIBILITY

Calypso Revision 3, 2, 1
ST25, CTS, CTM, SRI, SRT contactless tickets
Intercode, T2016, CD97-2, Hoplink A, B, C, D, etc.
Windows 7, 8, 10

COMPONENTS PROVIDED

Card reader and SAM
